CODE CRAFT · ADD-ON GUIDE · VERSION 1.0

Auto Currency Rates Add-on

For Code Craft Store: Django Ecommerce (sold separately). You need the store installed first.

The add-on's card in Admin → Add-ons.

What it does and how to install it

Updates the rates of your enabled currencies once a day from a free exchange-rate API: open.er-api.com or Frankfurter (ECB). It runs on the first store visit after 24 hours, so no cron job is needed; `python manage.py update_currency_rates` runs it on demand. If the fetch fails, your manual rates stay unchanged.

1. Upload the `auto-currency-rates` folder as `addons/auto-currency-rates/` and restart the app.
2. Admin → Add-ons → Auto Currency Rates: choose the source, an optional margin % (e.g. 2 to cover conversion fees) and any currencies to keep manual, paste the licence key, Enable, Save.
3. Check Admin → Currencies the next day: the "Rate updated" column shows when each rate was fetched.

Optional cron (VPS): `15 3 * * * cd /srv/store/app && .venv/bin/python manage.py update_currency_rates`

> Honest testing note: this add-on follows the provider's official API documentation. Its automated tests answer every provider call with a simulated response (including forged and expired signatures and wrong amounts); it has not processed real payments. Always run a test or sandbox payment before going live.

Where things are

- `addon.json`: id, version, type and the settings shown in the admin.
- `hooks.py`: the calls to the provider.
- `urls.py`: return and webhook endpoints under `/addons/auto-currency-rates/`.

Each add-on has its own licence key (in your purchase email and at coodecraft.com/account). Help: coodecraft.com/contact.
