Bundlewright — Product Bundles for WooCommerce: user guide

Bundlewright adds WooCommerce product bundles to your store: one product made of products you already sell, at a bundle price or discount, with the stock of every item kept right.

---

1. Requirements

- WordPress 6.4 or newer, PHP 7.4 or newer.
- WooCommerce 8.0 or newer (tested with WooCommerce on WordPress 7.1).
- For stock deduction: WooCommerce → Settings → Products → Inventory → "Enable stock management" on, and stock management on for the items you bundle.

---

2. Installation

1. Install and activate WooCommerce.
2. Plugins → Add New → Upload Plugin, choose the Bundlewright zip and activate it.
3. A new **Bundles** menu appears in the admin.

Activating Pro

1. Install the Pro zip from your coodecraft.com account (it replaces the free plugin; your settings and bundles stay).
2. Go to **Bundles** → **Licence**, paste your licence key and click **Activate**.
3. Monthly and yearly keys switch the Pro options off when they end and back on when you renew (use "I have paid — check again" on the Licence screen after paying). Lifetime keys never end.

---

3. Create a bundle (Free)

Screens: `bundles-list`, `bundle-editor`.

1. **Bundles** → **Add bundle** opens a new product with the product type **Bundle** already chosen. (You can also use Products → Add New and pick "Bundle" in the Product data box.)
2. Give it a name, a description and a product image like any product.
3. Open the **Bundle items** tab:
   - Search for a product and set its quantity. Click **Add item** for more rows; the × removes a row.
   - You can add a simple product or one exact variation ("Organic Cotton Crew T-Shirt – Navy, M").

- **Bundle pricing**: *Percent off the items bought separately* (for example 15) or *Fixed bundle price* (for example 129.00).

4. Click **Publish**. Below the pricing you see "Saved bundle: items bought separately … bundle price …".

The bundle's tax class (General tab) and its weight, size and shipping class (Shipping tab) are the bundle's own: the bundle ships and is taxed as one product.

What shoppers see

Screen: `front-bundle`. The product page lists every item with its picture and quantity, the price "Bought separately", the "Bundle price" and "You save … (…%)". One button adds the bundle. On shop pages a bundle shows its bundle price with the separate price crossed out.

Cart, checkout and orders

Screens: `block-cart`, `classic-checkout`, `admin-order`. The bundle is one line in the cart at the bundle price, with "Includes: 1 × Pour-Over Coffee Set, 2 × Stoneware Coffee Mug" under it. The same list is saved on the order and shown on the thank-you page, in the admin order screen and in order emails. It works on the block cart and checkout and on the classic shortcode pages.

Stock

- When an order is processing, on hold or completed, the stock of every item in each bundle goes down (bundle quantity × item quantity) and an order note lists the old and new stock levels.
- When the order is cancelled, fails or goes back to pending, that stock is put back.
- A bundle is out of stock as soon as one item cannot make one more bundle.
- The cart and checkout add up everything the cart needs: a shopper cannot buy more of an item than you have, whether it is in a bundle, on its own, or both.

---

4. Pro options

Build your own box

Screens: `pro-box-editor`, `pro-box-front`. In the Bundle items tab choose **Bundle type → Build your own box**. Pick the products shoppers may choose from (simple products or exact variations), the minimum and maximum number of items, and the box pricing: a percent off the chosen items or a fixed price per box. On the product page shoppers use + and − on each product; the counter and the price update as they pick, and the button turns on once the minimum is reached. The server checks the choice again (only listed products, within the minimum and maximum, in stock).

Optional and variable items, per-item discounts

Screens: `pro-items-editor`, `pro-options-front`.

- Add a **variable product** as an item and shoppers choose the colour/size inside the bundle. Only variations that are in stock are offered.
- Tick **Optional** on an item and shoppers can add it with "Add to my bundle".
- **Item discount %** on each row plus **Per-item discounts** under the pricing gives every item its own discount. Without per-item discounts: with a percent discount every chosen item gets it; with a fixed bundle price, the fixed price covers the required items and optional items use their own item discount.

Itemised display

Screens: `settings`, `block-checkout-itemised`. **Bundles** → **Settings** → **Bundle contents in cart and orders** → **Itemised** shows each item on its own line with its price instead of one "Includes" line.

Sales report

Screen: `report`. **Bundles** → **Sales report** shows, for the last 7, 30, 90 or 365 days: orders with bundles, bundles sold, items shipped, revenue (bundle line totals before tax) and how much shoppers saved, per bundle. Orders count while processing, on hold or completed; cancelled orders drop out.

---

5. Settings

- **Contents label**: the word before the item list ("Includes").
- **Savings**: show "Bought separately" and "You save" on bundle pages.
- **Bundle contents in cart and orders** (Pro): one line or itemised.
- **Delete all plugin data when the plugin is deleted**: off by default. Bundle products are WooCommerce products and are never deleted; when this is on, deleting the plugin removes its settings and the bundle settings stored on those products.

---

6. When a Pro licence ends

Fixed bundles keep working. Bundles that use a Pro option (box, optional or variable items, per-item discounts) show "This bundle is not available right now" and cannot be added to the cart, so nothing is sold at a wrong price; their settings are kept and they work again after renewal. Itemised display falls back to one line and the sales report is hidden.

---

7. FAQ and troubleshooting

- **The bundle shows as out of stock.** One item is out of stock or has less stock than the bundle needs. Check each item's stock.
- **Stock did not change after an order.** Stock management must be on in WooCommerce and on the item. Stock changes when the order becomes processing, on hold or completed.

- **Can I change an order's bundle in the admin?** Editing bundle lines on an existing order in the admin does not change item stock; cancel and re-create the order instead.
- **Is a bundle a separate product in reports?** Yes, WooCommerce reports show the bundle as a product; the items inside are in the Bundlewright sales report (Pro).
