Auto Currency Rates — Guide

Add-on for **Code Craft Store: Laravel Ecommerce**. Version 1.0.0.

Updates the exchange rate of every enabled currency once a day from a free rates API. If the API can't be reached, your current (manual) rates stay in place.

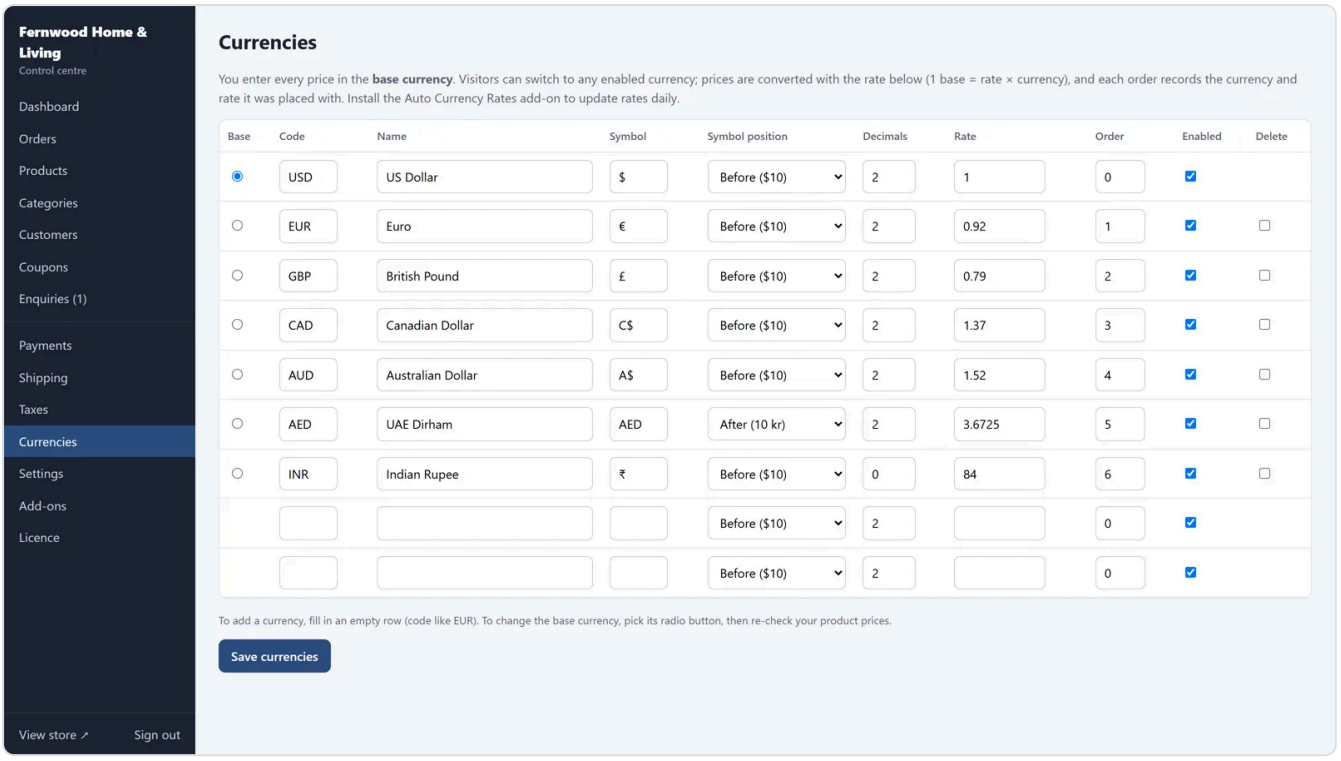

Install

1. Upload the `auto-currency-rates` folder from the zip to your store as `addons/auto-currency-rates/` (cPanel or Hostinger File Manager, or FTP).
2. Open **Admin** → **Add-ons**. The add-on appears with its settings card.
3. Fill in the settings below, paste the add-on's licence key from your purchase email, tick **Enable this add-on** and save.
4. Use **Fetch rates now** on the card, then check **Admin** → **Currencies**.

Settings

Rates source	Options: ExchangeRate-API open endpoint (open.er-api.com, no key, about 160 currencies) · Frankfurter (api.frankfurter.app, no key, ECB reference rates, about 30 currencies)
Add a margin to every rate (%)	For example 2 makes foreign prices 2% higher to cover card conversion fees. 0 = use the rate as published.

Currencies to leave alone	Comma-separated codes whose rate you want to keep setting by hand, for example AED.
Update automatically once a day	Runs on the first visit after 24 hours, so it works on shared hosting without a cron job. With a cron job you can also run: php artisan store:currency-rates
Licence key	From your purchase email or coodecraft.com/account. Not needed on localhost.

Details

```
Auto Currency Rates 1.0.0 - add-on for the Code Craft Laravel Ecommerce Store
============================================================

Updates the exchange rate of every enabled currency once a day from a free rates API. If the API
can't be reached, your current (manual) rates stay in place.

Install
-------
1. Upload this folder to your store as addons/auto-currency-rates/ (so addons/auto-currency-
rates/addon.json exists).
2. Open Admin -> Add-ons, fill in the settings and your licence key for this add-on, tick Enable,
Save.

Fetches rates for every non-base currency once a day (on the first visit after 24 hours, so no
cron
is needed) from open.er-api.com or api.frankfurter.app (both free, no key). Optional margin %, a
list of currencies to leave manual, a Fetch rates now button and the command php artisan
store:currency-rates. If the API fails your existing rates are kept.

Testing: this add-on was tested with mocked HTTP responses only (no real keys, no real payments).
```

```
Use the provider's test/sandbox mode first and place a test order before going live.

Support: https://coodecraft.com/contact
```

> Rates come from free public services; your manual rates are kept whenever the service cannot be reached.
