Razorpay payments for Code Craft Store (Next.js)

Add-on version 1.0.0 · sold separately · licence item `nextjs-store-razorpay-addon`

UPI, cards, netbanking and wallets through **Razorpay Standard Checkout**.

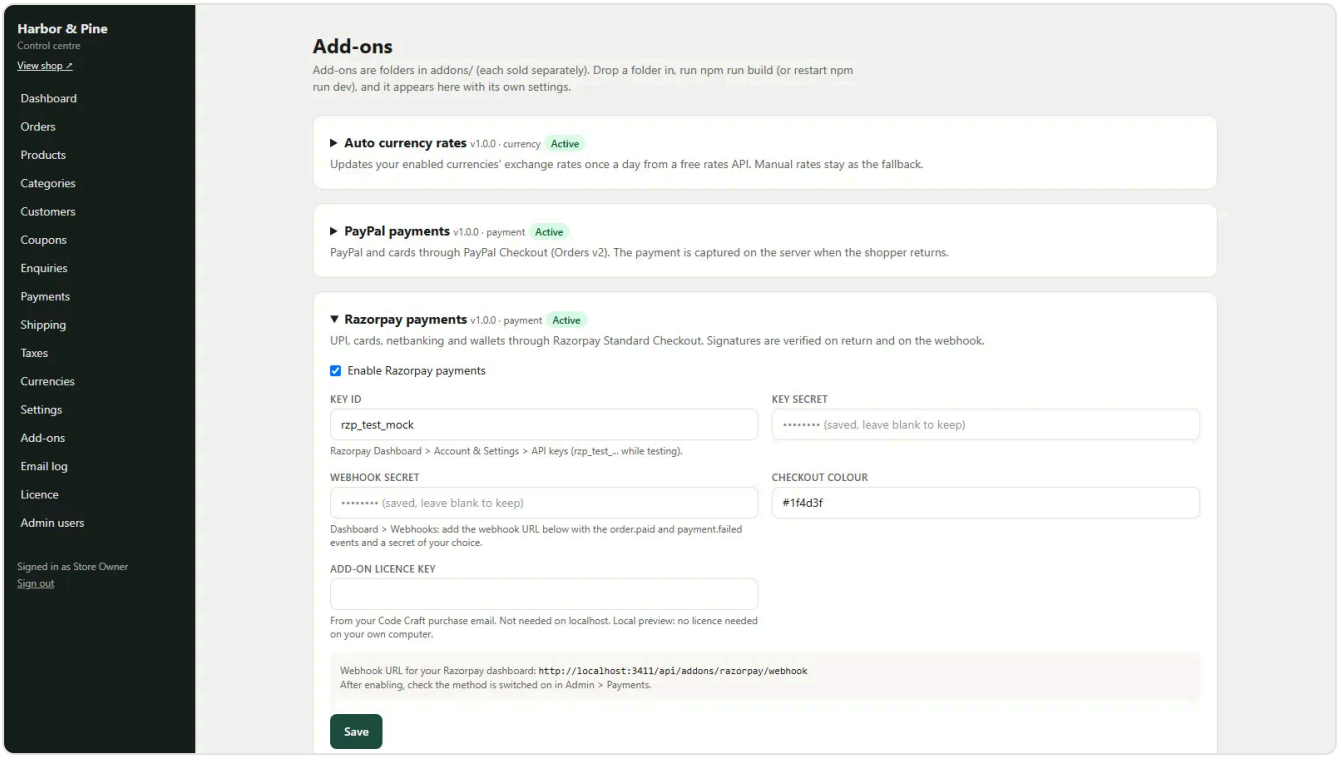

How it works

- The store creates a Razorpay order (POST /v1/orders) for the exact amount in paise (or the order currency) and opens Razorpay Checkout.
- After payment Razorpay posts back `razorpay_payment_id`, `razorpay_order_id` and `razorpay_signature`. The add-on verifies HMAC-SHA256(order_id + "|" + payment_id, key secret), then reads the order and payment from the Razorpay API; the store checks amount and currency before marking the order **Paid**.
- Webhooks (order.paid, payment.captured, payment.failed) are accepted only with a valid `X-Razorpay-Signature` (HMAC-SHA256 of the raw body with your webhook secret).
- The key secret never reaches the browser.

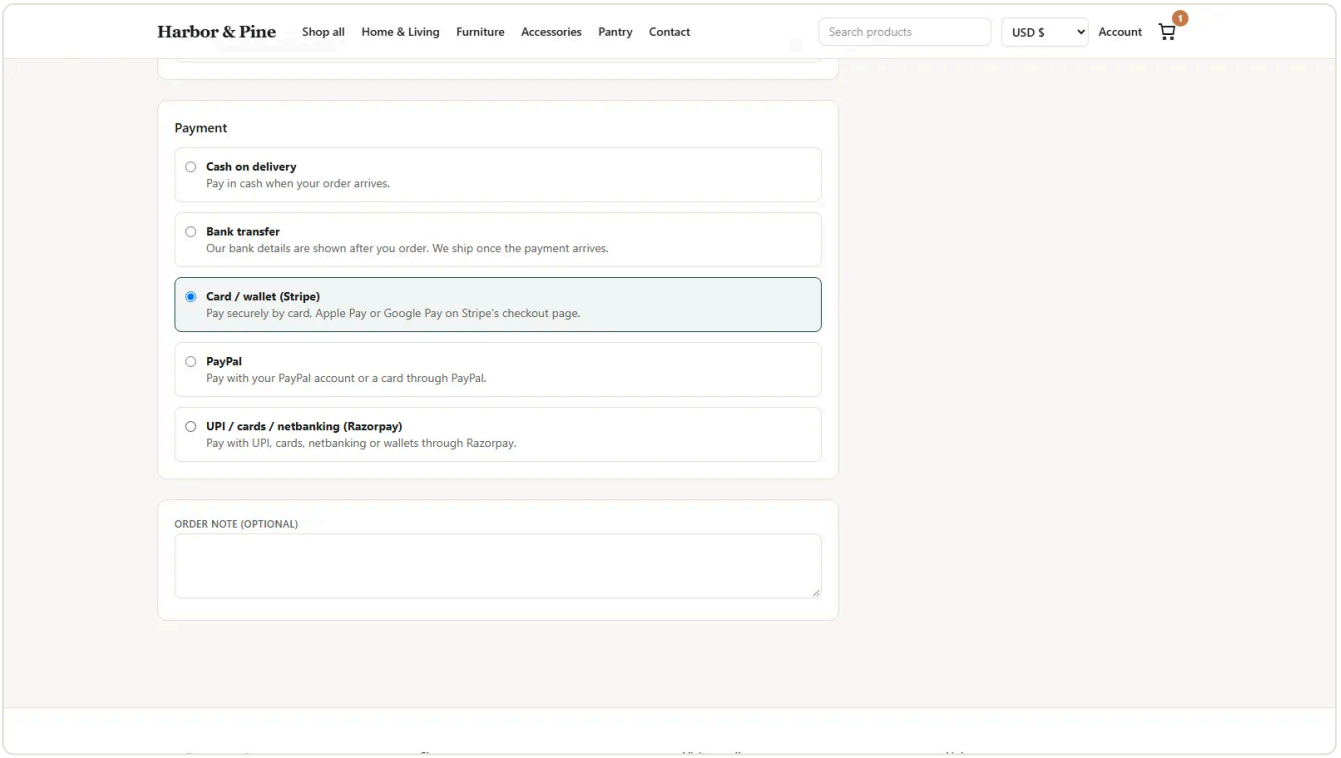

Settings

- **Key ID / Key Secret**: Razorpay Dashboard > Account & Settings > API keys (rzp_test_... while testing).
- **Webhook secret**: Dashboard > Webhooks > Add `https://your-shop.com/api/addons/razorpay/webhook` with order.paid and payment.failed and a secret of your choice.
- **Checkout colour**: the colour of the Razorpay window.

Note: Razorpay accepts INR for most accounts; other currencies need international payments enabled on your Razorpay account.

Razorpay settings in Admin → Add-ons.

Razorpay as a payment choice at checkout.

Install

1. You need Code Craft Store (Next.js Ecommerce) 1.0 or later.
2. Copy this folder into the store as `addons/razorpay/` (keep the folder name).
3. Run `npm run build` and restart the store (or restart `npm run dev`).

4. Open **Admin > Add-ons > Razorpay payments**, tick Enable, fill in the settings and paste the add-on licence key (not needed on localhost).
5. Payment add-ons also appear in **Admin > Payments**, where you can rename them and set their order.

Tests

From the store folder: `npm test`. The tests answer every gateway API call with a mock, so they run without keys and never contact the provider.

Honest notes

This add-on follows the provider's official API documentation and is tested against mocked API responses. Before taking real orders, place a test order with your provider's test/sandbox keys.
