Auto currency rates add-on for Northfield Store (Node.js)

By Code Craft (https://coodecraft.com). Requires Northfield Store (Node.js ecommerce store) 1.0 or later.

Install

1. Copy this folder (`auto-currency-rates`) into your store's `addons/` folder, so the file `addons/auto-currency-rates/index.js` exists.
2. Restart the store (Hostinger/cPanel: Restart app; VPS: `pm2 restart store`).
3. Open **Admin** → **Add-ons**. Paste your Code Craft licence key for this add-on (not needed on localhost).

Set up

1. Admin → Add-ons → Auto currency rates → Enable.
2. Choose the rate source: ExchangeRate-API open access (about 160 currencies) or Frankfurter (European Central Bank rates, about 30 currencies). Neither needs an API key.
3. Optional: add a markup % to cover conversion fees, and change how often rates update (default every 24 hours).
4. Press “Update rates now” to fetch immediately. The result appears as “Last run” on the add-on.

Set `APP_URL` in the store's `.env` to your real https address: it is used for return and webhook links.

How it works

Once per interval the add-on fetches the latest rates for your base currency and updates every currency in Admin → Currencies. Currencies the source does not cover keep the rate you entered by hand, and if the service cannot be reached all manual rates stay as they are.

Testing note

This add-on was tested with mocked HTTP responses that follow the provider's published API (see `test/` in the add-ons source). It has not been run against a live account by Code Craft; always place test-mode orders before going live.
